Volume 13 Issue 2

Capitol Restoration Task Force Considers Options

The Capitol Restoration Task Force met at the Statehouse on August 22, 2005, to discuss findings and impressions from a recent trip some members took to view the restoration of the Utah State Capitol in Salt Lake City. Utah restoration efforts include the construction of two new legislative buildings adjacent to the Statehouse, as well as extensive restoration and seismic retrofitting of the Statehouse.

Consultants Lemley and Associates, Inc. and 3D/International provided an analysis of a proposal to add two above-ground wings to the Idaho Statehouse. The consultants answered questions raised about the concept at a May task force meeting and outlined a modified, underground wings approach, an option they described as "garden-level" wings.

The task force asked Pam Ahrens, director of the Department of Administration, to review the 2000 Capitol Master Plan and provide updated figures as to square footage needs (current needs and estimated future needs) as they relate to the Capitol Restoration and the Capitol Mall. The task force also requested that parking needs be assessed.

Following discussion, the task force asked staff to arrange a tour of the Texas State Capitol restoration and extension. The restoration and extension of the Texas Statehouse, completed in 1993, included a large (750,000 square foot) underground addition. The Texas trip, tentatively scheduled for the first week in October, will be followed by a task force meeting in Boise on October 5.

JFAC Schedules North Idaho Tour

The Joint Finance-Appropriations Committee is scheduled to tour North Idaho October 10-13. The meetings and facility visits will feature the Idaho Panhandle area of Sandpoint, Bonners Ferry, Priest River and Priest Lake.

In addition to various site visits at state facilities and local public schools, JFAC will receive updated reports on the overall general fund budget picture and participate in a half-day workshop for review and discussion of major FY 2007 agency budget requests. Members will also receive updates on the Ponderosa Park project, water settlement funding, liquor fund distribution, State Employee Compensation Interim Committee and the Capitol Restoration Task Force.

Staff Contact: Jeff Youtz

State Employee Compensation Studied

The State Employee Compensation Interim Committee met for a day and a half on June 25 and 26. Committee members received an overview of state compensation statutes and of the health insurance and retirement components of the state's benefit package. Several agency directors testified about specific compensation challenges they face.

When the committee met again on August 29 and 30, a panel of agency human resource directors discussed ways to improve compensation laws and policy. The committee then broke into work groups to develop action items for future consideration.

On October 25 the committee will meet to work on developing proposed legislation for the next session.

Staff Contact: Matt Freeman

Interim Committee Activities

Property Tax Interim Committee

The Property Tax Interim Committee has now concluded its statewide series of public hearings — July 27 in Sandpoint and Coeur d'Alene, July 28 in Moscow and Lewiston, August 10 in Hailey and Twin Falls, August 11 in Pocatello and Rexburg, August 24 in McCall and Emmett, and August 25 in Boise and Nampa.

The committee heard testimony from interested and affected citizens throughout the state. In some of the areas, residential property values are escalating rapidly and in other areas the increases in residential property values are modest. Those testifying included homeowners, local elected officials, local government and school district officials, legislators and business owners.

As stated in the authorizing concurrent resolution, the goal of recommendations this interim committee presents to the Legislature is to develop a strategy to implement a property tax structure over the succeeding years that:

- ▶ is balanced in its application and effect;
- ▶ encourages economic development;
- ▶ meets the revenue needs of local units of government;
- ▶ encourages and assists economic development; and
- ▶ answers the concern over rising property values and property taxes.

The committee has scheduled its next meeting for September 13 in Boise.

Staff Contact: Mike Nugent

The Property Tax Interim Committee will meet on September 13 in Boise to discuss ideas and begin developing recommendations for the Legislature — the 14-member committee has decided to require a two-thirds majority in favor of any official recommendation.

Energy, Environment and Technology Interim Committee

The Energy, Environment and Technology Interim Committee met in Boise on August 8. Mike Heckler, Windland Inc., presented information about Idaho Power's filing with the Public Utilities Commission regarding the Public Utility Regulatory Policy Act (PURPA) rates from wind farms and its RFP on the same subject. Ramish Raman presented information regarding a coal gasification plant that is proposed to be built on the old FMC site in Power County. A representative of MidAmerican Energy Holdings Company discussed the company's proposed acquisition of PacifiCorp in Southeast Idaho. Then the committee heard comments on the Energy Facility Siting Draft legislation from representatives of utilities, counties and other persons in attendance.

The committee has scheduled its next meeting for October 5, when it will hear from state and federal agencies about which permits and processes they utilize in choosing the site for a major energy facility.

Staff Contact: Mike Nugent

Biotechnology Task Force

The first meeting of the task force was held in Boise on July 27, 2005. The focus of this meeting was to provide a broad overview of the status of biotechnology in Idaho, and included a video presentation "*Biotechnology: Knowledge Serving Life*" provided by Philip Syrdal, Bioldaho.

Megan Ronk, policy advisor, Office of the Governor, reviewed the historical development of the governor's Science and Technology Advisory Council, its membership, accomplishments, and support of business. In 2004 the Office of Science and Technology was created to implement and support a state strategic plan which includes establishing Idaho as a national center for biotechnology.

Wayne Hoffman, special assistant to the director of the Department of Agriculture, informed the task force that agriculture as it has been known is changing, new stages and innovations are emerging, and more job opportunities are being created. It is still unknown how we will meet the supply of world demands, how land use will be reconfigured, where the development of genetically modified foods will lead, and how the department will shape the political and regulatory climates of the state. By monitoring what other states are doing, Idaho can determine how to stay competitive and at the same time protect its own interests.

Karl Tueller, executive director, Office of Science & Technology of the Department of Commerce and Labor, presented the task force with detailed information concerning the Science & Technology Advisory Council, the strategic plan and the activities of the Office of Science & Technology and Idaho Agriculture/Biosciences.

Dr. Michael Laskowski, University of Idaho, director BRIN/INBRE [Biomedical Research Infrastructure Network / Idea Network of Biomedical Research Excellence] grant programs and former director of the Washington-Wyoming-Alaska-Montana-Idaho (WWAMI) medical program, discussed the WWAMI medical program, the Idaho BRIN/INBRE program and the Governor's Forum on Bioscience and Technology.

Dr. Laskowski described the WWAMI medical school program as a medical school without walls which has provided Idaho citizens access to medical school since 1972. The emphasis is on primary and rural care where three of four years of medical school can now be obtained in Idaho. The Idaho BRIN program builds opportunities for biomedical research in Idaho. By encouraging our universities to work together, science gains priority over politics, and has resulted in over \$8 million in grants from the National Institutes of Health. INBRE grant moneys have helped to create a statewide research network for building a sustainable infrastructure and creating an educated workforce. He emphasized that Idaho has the opportunity to build future economic stability through biosciences and technology. As a result of the Governor's Forum on Science and Technology, Idaho's core competencies were identified, and each was analyzed for its strengths, weaknesses, opportunities and challenges.

Philip Syrdal, president, Idaho Bioscience Association (Bioldaho), explained that Bioldaho is a network of universities, colleges, business leaders, corporations,

The charge of the Biotechnology Task Force is to undertake and complete a study of the economic development opportunities relating to the biosciences, imaging, power, energy and nanoscience.

national and state labs, private research and development labs, economic development agencies, developing bioscience companies and individual entrepreneurs. It is now time to involve legislators, to identify what Idaho does well, to develop those niches and compete on a national and international scale. Now that Idaho is attracting companies who use our land, labor and assets, it is important to make sure Idaho's resources are protected and sustained, and that Idaho's best students remain in Idaho. Mr. Syrdal emphasized the importance of creating an atmosphere of motivation to attract the very best researchers, which in turn will elevate our credibility and which can be held intact if we continue to build the infrastructure.

Additional informational meetings are planned for September 7 and September 29, with a final meeting sometime in October.

Cervical Cancer Elimination Interim Committee

The Cervical Cancer Elimination Interim Committee held its first meeting on August 9, 2005, in the group room of St. Luke's Mountain States Tumor Institute in Boise. The committee received information on the medical aspects of cervical cancer, epidemiology and statistics, and early detection programs conducted with federal funds. Administrative staff of the institute conducted a tour of their facility, and the committee viewed a live webcast, *"HPV and Cervical Cancer: An Update on Prevention Strategies,"* presented by the Centers for Disease Control and Prevention.

Dr. Lee Parsons, chairman of the Idaho Section of the American College of Obstetricians and Gynecologists, presented the medical basics of cervical cancer. Cervical cancer is primarily caused by a human papillomavirus (HPV), of which there are many types. By far the most common means of transmission is sexual contact. While a majority of adults have experienced an HPV infection, most often there are no symptoms and eventually the virus goes away. The major risk factors associated with the development of cervical cancer from an HPV infection include smoking, early onset of sexual activity, and multiple sexual partners. Treatments for pre-cancer and cervical cancer vary with the extent of the invasion.

Dr. Patrice Burgess, president of the Idaho Medical Association and a faculty member at the Family Medicine Residency of Idaho, explained that cervical cancer is completely preventable with early detection, Pap smears being a highly effective procedure to detect infection and pre-cancer risk. There are problems, however, with testing and treatment for a population of women who have no access and no insurance coverage to pay for medical care. The opportunity to educate such women is usually after the fact. Unfortunately, birth control measures do not prevent this disease.

Dr. Leigh Morse, Family Practice Medical Center, discussed the problem of cost as a barrier to having follow-up Pap smear tests performed after an initial test shows abnormal results. She recommended expanded screening through increased funding and education, and suggested that treatment centers be reimbursed for these costs.

Members of the Cervical Cancer Elimination Interim Committee are reviewing data and evaluating current methods used to provide Idaho women with information regarding cervical cancer, access to regular screening and options for increasing screening accuracy.

Dr. Michael Myhre, founder and owner of IDX Pathology, president-elect of the Ada/Canyon Medical Society and a trustee of district four of the Idaho Medical Association, informed the committee that cervical cancer mortality in North America has not declined since 1980 due to high-risk populations who do not undergo annual Pap smear testing. Dr. Myhre noted that the Thinprep version of the Pap smear test is better than the traditional Pap smear test which only detects disease 51 percent of the time, making it very important that the test be repeated annually. While the Thinprep test is initially more expensive, studies have shown that it is more cost-effective due to its better sensitivity and specificity.

Dr. Jerry Perez, the only gynecological oncologist in three western states and one of only 500 in the country, said that cervical cancer is unique in that it follows a slow, predictable course, and that because 40 percent of regular Pap smears give a false negative result, it is vitally important that tests be taken annually to catch a true positive if it exists. He also discussed the ubiquitous nature of HPV, a skin virus, which makes transmission more difficult to prevent. Dr. Perez pointed out that more men are carriers of HPV than women.

Chris Johnson, an epidemiologist with the Cancer Data Registry of Idaho, reported first on the incidence of all cancers, most of which are diagnosed at 55 years of age and older. In 2003, breast cancer was the most highly reported cancer for Idaho women; cervical cancer was 13th. However, the survival rate for breast cancer in 2003 was 87 percent, compared to only 60 percent for cervical cancer. The number of cervical cancer cases and deaths have continued to decline in Idaho, although the decline has been very modest in recent years. Idaho ranks fairly low in the number of cervical cancer incidents per 100,000 female population. Curiously, Idaho ranks 50th among the states in cervical cancer screening through Pap smear testing.

Minnie Inzer Muniz, program manager of Women's Health Check (WHC), Division of Health, Department of Health and Welfare, informed the committee that the department provides screening and annual Pap smear testing for individuals eligible for BCC Medicaid, funded by the Centers for Disease Control and Prevention. The program is currently at capacity for the funding level, providing testing for over 3,000 women. WHC partners with other cancer-fighting groups, including those with an emphasis on breast cancer, to pool its efforts to increase effectiveness.

Richard Schultz, administrator, Division of Health, Department of Health and Welfare, said the division's emphasis is on prevention, not only with regard to cervical cancer, but with all sexually transmitted diseases. Administrator Schultz observed that teens and young adults, the target population, need to be motivated to change high-risk behaviors. The division has recently launched an advertising campaign concerning sexually transmitted diseases that is targeted to young adults from 18 to 24 years of age.

Dan Heincy and Scott Burns, Merck & Co., said a vaccine for HPV types 16 and 18 is being developed by Merck. Clinical trials have been completed, but the vaccine has not yet been submitted to the Federal Drug Administration for approval.

Membership of all interim committees, meeting minutes and a calendar of scheduled meetings are all available on the Legislature's Web site:

Legislative Audits Report

Legislative Audits has recently released three reports with findings, as summarized below. Eight additional reports were released without findings, including reports for the Board of Education, Idaho Horse Board, Division of Financial Management, Outfitters and Guides Licensing Board, Idaho Real Estate Commission, Lieutenant Governor's Office, the Board of Professional Engineers and Professional Land Surveyors, and the Office of Species Conservation.

Division of Building Safety

The division contracted work to enhance its computerized receipting system without obtaining bids as required by state rules. The report recommends that the division follow state bidding rules and improve its contract documents by including a statement of work, retainage clauses, penalty clauses and a detailed work plan that includes processes to manage troubleshooting, project changes and formal training.

Department of Environmental Quality

The first finding and recommendation found that the department hired temporary employees for eight months of the year, and then hired the same employees for an additional four months through an employment agency. Using temporary employees in this manner may not be in accordance with state policy or Internal Revenue Service regulations. The department has decided it will not employ temporary employees in any manner that may be inconsistent with state policies.

The second finding involves billing and accounting errors. The report finds that internal controls in the permit billing system need to be improved and that reviews should be made to ensure accurate invoices. After this legislative report, the department billed for a \$10,000 air permit that had not previously been collected.

Idaho Commission on the Arts

The commission was not in compliance with federal grant cash management requirements. The commission receives various formula-based grants from the National Endowment for the Arts (NEA). The NEA requires that requests for funds must reflect expenses already incurred or that will be incurred within 30 days from the date the authorization of funds is signed by the NEA. There were several instances where the commission took up to 6 months to spend federal cash advances. Noncompliance with grant regulations could result in withheld grant payments, terminated grants or required interest reimbursement. With the assistance of the auditors, the commission has obtained training CDs to provide additional grant management training to its staff.

Staff Update

Legislative Audits welcomes new staff member Brian Butkus. Brian has an accounting degree from Boise State University and a bachelor's degree in history from Northwest Nazarene University. Prior to joining Legislative Services, Brian held positions with Home Federal Bank, Jabil Circuit and Micron.

Copies of all audit reports are available upon request to Legislative Audits by calling 334-4832. Executive summaries of audit reports for fiscal years 2000 through 2004 are available on the Legislature's Web site:
